Eye health and sight loss

Last Modified 07/01/2026 14:23:26

Introduction

Sight loss and blindness can be generally defined as a limitation in one or more functions of the eye or visual system, most commonly impairment of visual acuity (sharpness or clarity of vision), visual fields (the ability to detect objects to either side or above or below the direction in which the person is looking), contrast sensitivity and colour vision.

Over two million people in the UK, and 1.9 million in England, are estimated to be living with sight loss that has a significant impact on their daily lives¹. These people meet the international definition of vision impairment (including everyone whose vision is worse than 6/12 Snellen - halfway down the optician's letter chart). This is the amount of vision loss that requires people to surrender their driving license in the UK.

The number of people living with sight loss in England is anticipated to increase by 21% over the coming decade². It is therefore important when planning for local support and preventative services that the needs of people with sight loss, and those at risk of losing their sight, are understood.

People with sight loss are more likely to experience financial and employment difficulties, lower wellbeing and increased feelings of isolation. Sight loss can also lead to difficulties accessing a wide range of healthcare treatment and services, emotional and practical support, and transport for work and social engagement.

The estimated economic cost of eye health and sight loss in the UK in 2013 was £28.1 billion, including £3 billion in direct healthcare system costs, including inpatient and daycase costs of £735 million and outpatient costs of £771 million. Indirect costs include an estimated £2.4 billion in reduced employment and £2.4 billion in informal care costs³.

Facts and Figures

An estimated 4,890 people in Blackpool were living with sight loss in 2022 (3.5% of the population), projected to rise to 5,500 by 2032⁴. This includes:

- 3,140 with mild sight loss
- 1,090 with moderate sight loss
- 660 people with severe sight loss

The older you are the greater the risk of sight loss. Since Blackpool has a higher than average population aged 75 and above, the estimated proportion of those living with sight loss is higher than the national average.

Sight loss can also be linked to deprivation, poor health and other health conditions. For example, smoking can double the risk of age-related macular degeneration (AMD) and obesity increases the risk of developing diabetes, which can cause sight loss. High levels of deprivation and poor health (including obesity, smoking prevalence and diabetes) in Blackpool may also increase sight loss prevalence among the population.

The RNIB estimates that in Blackpool in 2022⁴:

- 6,730 people were living with the early stages of age-related macular degeneration (AMD)
- 1,620 people were living with cataract
- 2,920 people were living with ocular hypertension, and a further 1,590 people with glaucoma
- 2,740 people were living with diabetic retinopathy, and of these 250 had severe diabetic retinopathy likely to result in significant and potentially certifiable sight loss

Locally, there was a recognised need for intelligence to support a better understanding of eye health and sight loss in Lancashire and South Cumbria and in March 2018, a proposal for a thematic JSNA for eye health was approved.

Stakeholders from more than 20 organisations and from all sectors across Lancashire and South Cumbria came together in June 2018 to give their input into the scope and goals for the project, and the project team, led by Stuart Clayton – CEO, Galloway's Society for the Blind, initiated the work.

This report presents the key findings and intelligence from this multi-agency project, along with the priority issues and some strategic recommendations for action to improve eye health and prevent sight loss in the Lancashire and South Cumbria area:

Lancashire and South Cumbria Eye Health and Sight Loss JSNA May 2019  (1,093 KB)

Shortly after this needs assessment, the focus of health and care systems turned to the COVID-19 pandemic, and the response to priorities outlined in the assessment was curtailed. In order to provide a springboard for further action, the needs assessment was revisited in 2022/23 at a local level as part of a large multi-agency project, with updated data about eye health needs, reflections about what has been achieved, and NHS-Trust-specific recommendations for further work.

The RNIB Sight Loss Data pack for Blackpool also provides information about blind and partially sighted people and those at risk of sight loss at a local level: [Blackpool sight loss briefing](#)
