Living and Working Well

Last Modified 20/01/2020 15:58:29

[Share this page](#)

This chapter focuses on the health and wellbeing needs of those who are of working aged, traditionally 16-64, who are considered to be able to and likely to work. Those who are in the working age population will have differing health needs to those in other populations, particularly where health issues are preventing the ability to work. It is also important to consider that the working age population are relied upon by the younger and retired populations to support the economy of an area.
